Techno CNC Systems, LLC., and Excitech-USA, Inc., announce Strategic Partnership to service the CNC Industry

New Hyde Park, NY---May 2014---Techno CNC Systems, LLC., and Excitech-USA, Inc., announce a new partnership between the two companies.

For more than 25 years, Techno has marketed CNC routers primarily servicing the small to medium sized production shops. President, Roy Valentine is confident this new partnership will open up new opportunities for the companies to expand into and service larger production markets. "This new partnership means that Techno customers can come back to us for new equipment that we didn't sell in the past. This will be very convenient for them as they will continue to work with our staff that they have come to know and have already developed a working relationship with. In addition, this new expansion means we will be hiring more staff, which is refreshing after years of job shortages. We are very excited about this new venture and expect this and the coming years to be prosperous for both Techno CNC Systems/Excitech-USA and our valued customers."

Future additions to the product line will include point-to-point CNCs, panel saws, and edgebanders, to name a few. The new additions will complete the production cell process to help any shop automate their production work flow.

See the newest equipment and videos at www.excitech-usa.com or call 516-328-3970 to learn more from their sales engineers. Alternatively, feel free to fill out a quotation form online at www.technocnc.com/rfq.htm or visit www.technocnc.com.
